

# Suyash Sharma

Full Stack Software Developer | Node.js, PostgreSQL, Linux & System Design

Delhi, India | +91 8755063079 | [Suyashsharma171001@gmail.com](mailto:Suyashsharma171001@gmail.com)

[LinkedIn: suyash-sharma-756375196](#) | [GitHub: SuyashSharma1710](#) | [Portfolio](#)

## Professional Summary

Full Stack Software Developer with hands-on expertise in UNIX/Linux environments, Node.js, and PostgreSQL database architecture. Proven track record of complete feature ownership—spanning UI development, usability feedback incorporation, quality control, and CI/CD deployment. Strong foundation in Data Structures, Algorithms, and Object-Oriented System Design with experience collaborating across design, product, and cross-functional teams to build scalable web applications.

## Core Competencies

Full-Stack Development • Node.js & REST APIs • PostgreSQL & Database Design • UNIX/Linux Environments • Data Structures & Algorithms • Object-Oriented Design (OOP) • Feature Ownership & QA • CI/CD & Deployment

## Technical Skills

**Languages:** JavaScript (ES6+), TypeScript, Python, C, C++, Kotlin, HTML5, CSS3

**Backend & Databases:** Node.js, Express.js, Django, PostgreSQL, SQL, Supabase, Neon, Drizzle ORM, REST APIs, Schema Design, Query Optimization, RBAC

**Frameworks & Web Technologies:** React.js, Next.js, Server Actions, Tailwind CSS, Responsive Web Design

**Systems & DevOps:** UNIX/Linux Environments, Shell/Bash, Docker, Git, GitHub, CI/CD, Vercel, Railway

**CS Fundamentals & QA:** Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), System Design, Postman (API Testing), Zod, Usability Feedback & Quality Control

## Professional Experience

### Senior Web Developer — Cliq Media

March 2025 – Present

- Assumed end-to-end feature ownership for production web applications using Node.js, React.js, Next.js, and PostgreSQL/Supabase hosted in Linux environments.
- Collaborated closely with design and marketing teams to translate requirements into responsive UI features and continuously integrated user usability feedback.
- Architected REST APIs, database schemas, authentication, and Row-Level Security (RLS) policies ensuring high reliability and data privacy.
- Managed Git-based CI/CD pipelines, automated testing, quality control, and production performance tuning on cloud infrastructure.

### Freelance & Contract Full-Stack Developer

2024 – Present

- Delivered 10+ full-lifecycle web applications, taking complete ownership from UI/UX design and backend integration to QA and post-launch technical support.
- Engineered REST APIs, PostgreSQL/SQL database models, authentication, and role-based access control (RBAC) using Node.js, Next.js, and Django.
- Iteratively incorporated client feedback to refine usability, streamline user workflows, and uphold strict quality standards.

### Software Development Intern — The Coding Cult Pvt. Ltd.

Dec 2024 – Feb 2025

- Developed modular team and task management features adhering to Object-Oriented Design (OOP) principles and multi-level RBAC workflows.
- Optimized backend database queries and PostgreSQL operations, boosting task assignment efficiency by 40%; containerized services with Docker on Linux, cutting setup time by 50%.
- Conducted extensive API testing and quality validation using Postman to ensure system reliability, bug-free releases, and data integrity.

### Web Development Intern — Sync Intern

Sep 2023 – Oct 2023

- Developed 4 full-stack Python/Django applications applying core Data Structures and Object-Oriented Programming patterns.
- Optimized server-side algorithms and relational database queries, improving execution speed by 50% while conducting thorough testing and debugging.

## Selected Software Projects

### WarrantySync — Warranty Ticket & Lifecycle Management

[Live Demo](#) | [GitHub](#)

*Technologies: Next.js, React, TypeScript, PostgreSQL, Supabase, REST APIs*

- Built a full-stack warranty claim and service-ticket management platform with **5-level RBAC** and workflow-based access control.
- Designed relational **PostgreSQL schemas** and implemented **Row Level Security (RLS)** for database-level authorization.

- Developed API workflows for claims, service tickets, assignments, status transitions, **OTP verification**, and audit logging.

### **Pitchery — Startup Discovery & Pitch Management Platform**

[Live Demo](#) | [GitHub](#)

*Technologies: Next.js, React, TypeScript, PostgreSQL, Drizzle ORM, Neon, Zod*

- Developed a full-stack founder-investor platform with **CRUD operations**, **search/filtering**, **comments**, and **private interactions**.
- Designed relational PostgreSQL schemas and implemented indexed data access using **Drizzle ORM**.
- Built validated server-side workflows with **Zod**, session-based authentication, and sanitized user-generated content.

### **SyncFlow Workspace Manager**

[Live Demo](#) | [GitHub](#)

*Technologies: Next.js, React, TypeScript, PostgreSQL, Supabase, Zustand*

- Built a project/workspace management platform with **nested projects**, **Kanban boards**, **tasks**, and **timeline tracking**.
- Implemented PostgreSQL-backed data access and **full-text search** across project and workspace data.
- Used Zustand for state management with **optimistic UI updates** and **rollback handling** for asynchronous operations.

## **Education**

---

**Master of Computer Applications (MCA)** — 8.75 CGPA

2026

Chandigarh University, Chandigarh

**Bachelor of Computer Applications (BCA)** — 8.46 CGPA

2024

COER University, Roorkee

## **Achievements & Technical Contributions**

---

- **Manthan Hackathon 2023:** Secured 7th place nationwide for developing an innovative software solution.
- **GirlScript Summer of Code (GSSoC) 2023–24:** Open-source contributor — feature enhancements, bug fixes, and documentation.
